David León Salas

Software Engineer | Backend & Data Automation

Veracruz, Mexico (open to remote) • davidleonsalasdev@gmail.com • +52 229 177 9456

github.com/DvLeu • dvleu.dev

Summary

Software Engineer specializing in **Python** and **Java** backend development, with hands-on experience building production APIs, multi-tenant systems, and cloud-native applications on **AWS** and **GCP**. Skilled in **REST API** design, authentication, database architecture, and data automation, with demonstrated results improving operational efficiency by up to 180×. English B2.

Education

Universidad Cristóbal Colón — *Veracruz, Mexico*
M.S. in Data Science, Computer Science — *Sept 2026 – present*

TecNM Instituto Tecnológico de Veracruz — *Veracruz, Mexico*
B.S. in Computer Systems Engineering — *Aug 2021 – May 2026*

- GPA: 3.6/4.0; member of the Competitive Programming Club (CPC).

Experience

Software Engineer — *Monterrey, Mexico*
ScaleFlow Technologies — *Aug 2026 – present*

- Built authentication, role-based access and tenant isolation for PROFILE 7, a multi-tenant HR platform, using **FastAPI**, **PostgreSQL** Row-Level Security and **AWS** Cognito.
- Designed and deployed odin-api, a **Flask** service with an **OpenAPI** contract, JWT auth and **pytest** contract tests, connected it to PROFILE 7 on **AWS** (ECS, CloudFront, **Terraform**), and wrote its technical documentation.
- Integrated Stripe payments and designed data models with the business team for FixNow, an on-demand repair services marketplace (**Java**/Quarkus, **Kubernetes** on **GCP**).

Freelance Full-Stack Developer — *Veracruz, Mexico*
Alvasu — *May 2026 – July 2026*

- Designed and delivered an offline-first desktop application (**React**, **Flask**, **SQLite**, **Electron**) for internal operations that works without internet.
- Built a date-effective cost calculation engine to track ingredient price changes, preserve historical recipe costs, and support profit analysis across production periods.

Data Engineer Intern — *Veracruz, Mexico*
TenarisTamsa — *Feb 2026 – June 2026*

- Built **Python ETL** pipelines unifying 5+ heterogeneous data sources (CSV, XML, Access, **Excel**, **SQL**), reclaiming ~1 hr/day of analyst time previously lost to manual aggregation.
- Fixed a performance bottleneck, cutting a 30-min daily data collection task to under 10 sec (180× speedup) by deploying scheduled **Python** scrapers as standalone executables with structured logging.

Python Backend Developer Intern — *Veracruz, Mexico*
NeoDigital — *Mar 2025 – Oct 2025*

- Architected and shipped a production **FastAPI** + **MongoDB REST API** serving SAT fiscal catalogs using **async Python** and layered architecture.
- Slashed catalog onboarding from hours to seconds by engineering **Excel** ingestion endpoints with **Pydantic** schema validation, blocking malformed records at the API boundary before reaching production.

Projects

Lnap — Educational Programming Tools — *Veracruz, Mexico*
Sept 2025 – Nov 2025

- Delivered two tools under an institutional research contract — an interactive programming visualization platform and a pseudocode-to-**Python** translator — adopted in live lectures and validated by 80+ first-semester students.

Skills

Languages: Python, **Java**, **SQL**
Backend: FastAPI, **Flask**, Quarkus, SQLAlchemy, **Pydantic**, REST APIs, **pytest**
Data & Cloud: PostgreSQL, **MongoDB**, **MySQL**, **AWS**, **GCP**, **Docker**, **Kubernetes**, **Terraform**, **CI/CD**, **Git**
AI & ML: Claude Code, Codex, Ollama, OpenAI API, scikit-learn, **KNN**, Decision Trees, Naive Bayes

Certifications

Google Cloud: Building Scalable **Java** Microservices with **Spring Boot** and Spring Cloud (Sep 2026)
MongoDB: Core Concepts & Architecture; Reliability & Availability (Sep 2026). **IBM:** AI Applications with **Python** and **Flask** (May 2025)
