

David León Salas

Junior Python Backend Developer

📍 Veracruz, Ver • ✉ davidleonsalasdev@email.com • ☎ 229 177 9456 • 🌐 DvLeu • 🌐 dvleu.dev

About me

Python backend engineer. 3 internships building production APIs in FastAPI, Flask, and Django, with Docker and Azure deployments. B.S. Computer Systems Engineering, May 2026 (90/100 GPA). EN B2 / ES native.

Education

TecNM - Instituto Tecnológico de Veracruz, B.S. in Computer Systems Engineering – Aug 2021 – May 2026
Veracruz, Mexico

- GPA: 90/100. Member of the Competitive Programming Club (CPC).

Experience

TenarisTamsa, Data Analyst Intern – Veracruz, Mexico Feb 2026 – present

- Built Python ETL pipelines ingesting 5+ heterogeneous data sources (CSV, XML, Access, Excel, PostgreSQL, SQL Server), saving ~1 hr/day of manual processing for the analytics team.
- Automated a 30-min manual download to ~10s (~180x) with Selenium scrapers feeding BI dashboards, deployed as PyInstaller .exe binaries on a scheduled VM with file-based logging for troubleshooting.
- Co-built a PowerApps + PowerFX app (owning architecture and core features) that replaced a fragmented Excel + email workflow, cutting handoff delays in tube-defect lifecycle management.

NeoDigital, Python Backend Developer Intern – Veracruz, Mexico Mar 2025 – Oct 2025

- Shipped a production FastAPI + MongoDB RESTful API for SAT fiscal-catalog management, applying layered architecture (routers/services/repositories) and async I/O via Motor.
- Slashed catalog onboarding from hours to seconds via Excel-to-JSON ingestion endpoints with Pydantic schema validation, preventing malformed records in production.
- Authored a reusable bulk-conversion script that became the team's default onboarding pipeline for new SAT catalogs.

Projects

Lnap — Educational Programming Tools – Veracruz, Mexico Sept 2025 – Nov 2025

- Built an interactive Flask-based visualization platform that explains programming structures across multiple languages, adopted in active classroom sessions and validated by 80+ first-semester students through structured feedback surveys.
- Developed a pseudocode-to-Python translator in Flask + Python under an institutional research contract, helping students bridge algorithmic thinking and formal syntax during live class sessions.

HealthMed Chat — Medical Diagnosis API – Veracruz, Mexico Mar 2024 – May 2024

- Designed a Flask REST API that returns a ranked Top-5 diagnosis list from patient inputs (age, gender, BMI, symptoms) via a two-stage inference engine — rule-based filtering followed by KNN scoring with confidence values.
- Instrumented structured session logging of inputs, outputs, and latency metrics to enable post-hoc accuracy evaluation and model performance analysis.

Skills

Languages: Python, Java, JavaScript, TypeScript, SQL

Backend & APIs: FastAPI, Flask, Django, Pydantic, async/await, RESTful API design

Databases: MongoDB, PostgreSQL, Microsoft SQL Server, MySQL

Infrastructure & Tooling: Docker, Git, CI/CD, Microsoft Azure, Linux, Selenium

Data & Analytics: ETL pipelines, Power BI, DAX, Matplotlib, Plotly

Certifications

Django Application Development with SQL and Databases — IBM (Oct 2025): Django ORM, models, views, templates, and SQL database integration.

Developing AI Applications with Python and Flask — IBM (May 2025): Flask REST APIs, Watson AI services, and cloud deployment workflows.

Samsung Innovation Campus — AI & Leadership, Samsung Electronics & UDEM (Apr 2025): 150-hour intensive program covering ML, neural networks, and leadership.

Foundations of Agile Project Management — Google (May 2026): Agile principles, Scrum framework, and sprint planning fundamentals.
